3. Evaluating compound expressions

## Truth functions, evaluating compound statements

1. Functions, arithmetic functions, and truth functions
2. Definitions of truth functions
3. Evaluating compound expressions
4. Categorizing statements (contingencies, tautologies, contradictions)
5. Relations between statements (equivalence, consistency, implication, validity)

## Functions

A function is something that takes inputs and produces outputs.

## Functions

## Arithmetic Functions

A function is something that takes inputs and produces outputs.

You can think of it as a sort of abstract machine - like a bread machine that will produce as 'output' bread, if it is given as 'input' flour, yeast, sugar, etc.

## Arithmetic Functions

Familiar examples of functions are the arithmetic functions addition, subtraction,

## Arithmetic Functions

Familiar examples of functions are the arithmetic functions addition, subtraction, multiplication and division

Addition takes 2 numbers as input, and produces 1 number as output

## Arithmetic Functions

Familiar examples of functions are the arithmetic functions addition, subtraction, multiplication and division

Addition takes 2 numbers as input, and produces 1 number as output

If you input 4 and 3, it outputs 7

Addition takes 2 numbers as input, and produces 1 number as output

If you input 4 and 3, it outputs 7
A function can be defined in terms of its entire input-output structure

Addition takes 2 numbers as input, and produces 1 number as output
If you input 4 and 3, it outputs 7

Addition takes 2 numbers as input, and produces 1 number as output

If you input 4 and 3, it outputs 7
A function can be defined in terms of its entire input-output structure
Input 1

|  | Input 2 | Output |
| :---: | :---: | :---: |
| x | y | $\mathrm{x}+\mathrm{y}$ |
| 1 | 1 | 2 |
| 1 | 2 | 3 |
| 2 | 1 | 3 |
| 2 | 2 | 4 |

A function can be defined in terms of its entire input-output structure
Addition '+'

| $x$ | $y$ | $x+y$ |
| :---: | :---: | :---: |
| 1 | 1 | 2 |
| 1 | 2 | 3 |
| 2 | 1 | 3 |
| 2 | 2 | 4 |

A function can be defined in terms of its entire input-output structure

## Addition '+'

Rickification ' $\wedge$ '

| $x$ | $y$ | $x+y$ |
| :---: | :---: | :---: |
| 1 | 1 | 2 |
| 1 | 2 | 3 |
| 2 | 1 | 3 |
| 2 | 2 | 4 |

| $x$ | $y$ | $x \wedge y$ |
| :---: | :---: | :---: |
| 1 | 1 | 2 |
| 1 | 2 | 3 |
| 2 | 1 | 3 |
| 2 | 2 | 4 |

| Addition ' + ' |  |  | Subtraction '-' |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| X | y | $x+y$ | X | y | $x-y$ |
| 1 | 1 | 2 | 1 | 1 | 0 |
| 1 | 2 | 3 | 1 | 2 | -1 |
| 2 | 1 | 3 | 2 | 1 | 1 |
| 2 | 2 | 4 | 2 | 2 | 0 |
| Multiplication ' $x$ ' |  |  | Division '+' |  |  |
| X | y | $x \times y$ | X | y | $x \div y$ |
| 1 | 1 | 1 | 1 | 1 | 1 |
| 1 | 2 | 2 | 1 | 2 | 0.5 |
| 2 | 1 | 2 | 2 | 1 | 2 |
| 2 | 2 | 4 | 2 | 2 | 1 |

Truth Functions

## Truth Functions

Truth functions are functions that take truth values as inputs, and produce truth values as outputs.

There are two truth values:
True (T)
False (F)

## Truth Functions

Truth functions are functions that take truth values as inputs, and produce truth values as outputs.

## Truth Functions

Truth functions are functions that take truth values as inputs, and produce truth values as outputs.

There are two truth values:
True (T)
False (F)
Every atomic statement is either True or False

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

H = I left you my house.
$C=I$ left you my car.

The statement operators that form compound statements (conjunction, negation, etc.)
symbolize truth functions.
H = I left you my house.

$$
\mathrm{C}=\mathrm{I} \text { left you my car. }
$$

I left you my house and I left you my
car. ( $\mathrm{H} \bullet \mathrm{C}$ )

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

$$
\begin{aligned}
& \mathrm{H}=\mathrm{I} \text { left you my house. } \\
& \mathrm{C}=\mathrm{I} \text { left you my car. }
\end{aligned}
$$

I left you my house and I left you my car. ( $\mathrm{H} \bullet \mathrm{C}$ )

| $H$ | $C$ | $H \bullet C$ |
| :---: | :---: | :---: |
| $T$ | $T$ |  |
|  |  |  |
|  |  |  |
|  |  |  |

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.
$\mathrm{H}=\mathrm{I}$ left you my house.
$\mathrm{C}=\mathrm{I}$ left you my car.

I left you my house and I left you my car. ( $\mathrm{H} \bullet \mathrm{C}$ )

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.
$\mathrm{H}=\mathrm{I}$ left you my house.
$\mathrm{C}=\mathrm{I}$ left you my car.
I left you my house and I left you my car. (H•C)

| $H$ | $C$ | $H \bullet C$ |
| :---: | :---: | :---: |
| $T$ | $T$ | $T$ |
| $T$ | $F$ | $F$ |
|  |  |  |
|  |  |  |

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

$$
\begin{aligned}
& \mathrm{H}=\mathrm{I} \text { left you my house. } \\
& \mathrm{C}=\mathrm{I} \text { left you my car. }
\end{aligned}
$$

I left you my house and I left you my
car. ( $\mathrm{H} \bullet \mathrm{C}$ )

| $H$ | $C$ | $H \bullet C$ |
| :---: | :---: | :---: |
| $T$ | $T$ | $T$ |
| $T$ | $F$ | $F$ |
| $F$ | $T$ | $F$ |
|  |  |  |

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

H = I left you my house.
C = I left you my car.
I left you my house and I left you my car. ( $\mathrm{H} \bullet \mathrm{C}$ )

| $H$ | $C$ | $H \bullet C$ |
| :---: | :---: | :---: |
| $T$ | $T$ | $T$ |
| $T$ | $F$ | $F$ |
| $F$ | $T$ | $F$ |
| $F$ | $F$ | $F$ |

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

H = I left you my house.
C = I left you my car.
I left you my house and I left you my car. (H•C)

The statement operators that form compound statements (conjunction, negation, etc.) symbolize truth functions.

$$
\begin{aligned}
& \mathrm{H}=\mathrm{I} \text { left you my house. } \\
& \mathrm{C}=\mathrm{I} \text { left you my car. }
\end{aligned}
$$

I left you my house and I left you my car. ( $\mathrm{H} \bullet \mathrm{C}$ )

| $H$ | $C$ | $H \bullet C$ |
| :---: | :---: | :---: |

Evaluating compound statements

$$
(P \bullet Q) \vee(Q \equiv P)
$$

Construct a Truth Table
Number of Rows $=2^{n}$
Where n is the number of atomic statements involved: $2^{2}=4$ [plus one on top]

$$
(P \bullet Q) \vee(Q \equiv P)
$$

|  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |
|  |  |  |  |  |

Construct a Truth Table
Number of Columns: 1 for each statement involved in the compound statement.
$P ; Q ; P \bullet Q ; Q \equiv P ;(P \bullet Q) \vee(Q \equiv P)=5$

$$
(P \bullet Q) \vee(Q \equiv P)
$$

Construct a Truth Table
Number of Columns: 1 for each statement involved in the compound statement.

$$
\mathrm{P} ; \mathrm{Q} ; \mathrm{P} \bullet \mathrm{Q} ; \mathrm{Q} \equiv \mathrm{P} ;(\mathrm{P} \bullet \mathrm{Q}) \vee(\mathrm{Q} \equiv \mathrm{P})=5
$$

$$
(\mathrm{P} \bullet \mathrm{Q}) \vee(\mathrm{Q} \equiv \mathrm{P})
$$

Column 1

Column 4

Column 5

$$
(\mathrm{P} \bullet \mathrm{Q}) \vee(\mathrm{Q} \equiv \mathrm{P})
$$

In the first columns on the "top" row (which is above Row 1), put the atomic statement in alphabetical order

$$
(\mathrm{P} \bullet \mathrm{Q}) \vee(\mathrm{Q} \equiv \mathrm{P})
$$

| P | Q |  |  |  |
| :---: | :---: | :--- | :--- | :--- |
| T | T |  |  |  |
| T | F |  |  |  |
| F | T |  |  |  |
| F | F |  |  |  |

In the columns under the atomic statements, fill out Ts and Fs so that every possible combination of truth values has a row

$$
(P \bullet Q) \vee(Q \equiv P)
$$

| P | Q |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| T | T |  |  |  |
| T | F |  |  |  |
| F | T |  |  |  |
| F | F |  |  |  |
| In the first column, top half Ts and bottom |  |  |  |  |

In the first column, top half Ts and bottom half Fs.
For each subsequent column, alternate groups of Ts and Fs half the size of the groups of the previous column, until finished.

$$
(P \bullet Q) \vee(Q \equiv P)
$$

| P | Q |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| T | T |  |  |  |
| T | F |  |  |  |
| F | T |  |  |  |
| F | F |  |  |  |

In the first column, top half Ts and bottom half Fs.
For each subsequent column, alternate groups of Ts and Fs half the size of the groups of the previous column, until finished.

| P | Q | $P \bullet Q$ | $Q \equiv P$ | $(P \bullet Q) \vee(Q \equiv P)$ |
| :---: | :---: | :---: | :---: | :---: |
| T | T |  |  |  |
| T | F |  |  |  |
| F | T |  |  |  |
| F | F |  |  | d up from th |

In subsequent columns, build up from the smallest compound statements to the largest, and fill in its truth column according to the truth function of that operator, and the truth values of the components

| P | Q | $\mathrm{P} \bullet \mathrm{Q}$ | $\mathrm{Q} \equiv \mathrm{P}$ | $(P \bullet Q) \vee(Q \equiv P)$ |

## Categorizing statements

## Categorizing statements

It is often useful to know the range of truth values that a statement can have.

## Categorizing statements

It is often useful to know the range of truth values that a statement can have.

Statements that are true in all alternate universes are tautologies.

## Categorizing statements

It is often useful to know the range of truth values that a statement can have.

Statements that are true in all alternate universes are tautologies.
Statements that are false in all alternate universes are contradictions.

## Categorizing statements

It is often useful to know the range of truth values that a statement can have.

Statements that are true in all alternate

## Categorizing statements

By definition, atomic statements are contingencies: they can be either true or false. This does not mean that all compound statements are contingencies, though. universes are tautologies.

Statements that are false in all alternate universes are contradictions.

Statements that are true in some universes and false in others are contingencies.

## Categorizing statements

By definition, atomic statements are contingencies: they can be either true or false. This does not mean that all compound statements are contingencies, though.

$$
P \vee \sim P
$$

To determine whether a statement is a tautology, contradiction, or contingency, do a truth table for that statement, and look at its truth column:
if it has only Ts, then it is a tautology
if it has only Fs, then it is a contradiction
if it has both Ts and Fs, then it is a
contingency

Equivalence, consistency,
Equivalence, consistency, implication, \& validity

1. Relations between two statements: equivalence, consistency, implication

Equivalence, consistency, implication, \& validity

1. Relations between two statements: equivalence, consistency, implication
2. Relations between three or more statements: equivalence, consistency, joint implication

## Equivalence, consistency, implication, \& validity

1. Relations between two statements: equivalence, consistency, implication
2. Relations between three or more statements: equivalence, consistency, joint implication
3. Argument validity

## Relations between two statements

## Relations between two statements

Just as it is often helpful to know whether an individual statement is a tautology,
contradiction, or contingency, it is also often helpful to know what relations hold between two statements.

## Equivalence

Two statements are equivalent iff they have

## Equivalence

Two statements are equivalent iff they have identical truth columns.

No matter what universe you are in, the statements will have the same truth value.

## Equivalence

Consistency
Two statements are equivalent iff they have identical truth columns.

No matter what universe you are in, the statements will have the same truth value.

To test for equivalence, construct a joint truth table for the two statements and compare their truth columns. If the columns are identical, then the statements are equivalent. If they are not identical, then they are not equivalent.

## Consistency

Two statements are consistent iff it is possible for them to both be true at the same time.

There is some universe in which the statements are both True.

## Consistency

Two statements are consistent iff it is possible for them to both be true at the same time.

## Implication

Statement $\varphi$ implies statement $\psi$ iff:
if $\varphi$ is true, then $\psi$ must be true.
There is some universe in which the statements are both True.

To test for consistency, do a joint truth table for the two statements. If there is a row (one or more) on which both statements are T, then they are consistent. If there is no row in which both are T, then they are inconsistent.

## Implication

Statement $\varphi$ implies statement $\psi$ iff: if $\varphi$ is true, then $\psi$ must be true.

In any universe where $\varphi$ is true, $\psi$ will also be true.

In any universe where $\psi$ is false, $\varphi$ will also be false.

## Implication

Statement $\varphi$ implies statement $\psi$ iff: if $\varphi$ is true, then $\psi$ must be true.

To see whether $\varphi$ implies $\psi$, do a joint truth table for $\varphi$ and $\psi$, and look for a row on which $\varphi$ is T and $\psi$ is F (a counter-example row). If there IS a counter-example row, then then $\varphi$ does NOT imply $\psi$; if there is NOT a counterexample row, then $\varphi$ DOES imply $\psi$.

Relations between three or more statements

Equivalence

A set of statements are equivalent if they all have identical truth columns

Consistency

A set of statements are consistent if there is at least one row on which they are all T .

Joint Implication
A set of statements ( $\varphi \cdot \cdot 1 \varphi$ ) јоintly imply statement $\psi$ iff: if ( $\varphi \ldots \varphi$ ) are all true, then $\psi$ must be true.

## Joint Implication

A set of statements ( $\varphi \cdot-1 \varphi$ ) jointly imply statement $\psi$ iff: if ( $\varphi \ldots \varphi$ ) are all ${ }_{\text {true, }}$ then $\psi$ must be true.
To test whether statements ( $\varphi \ldots \unlhd$ ) jqintly imply statement $\psi$, do a joint truth table with all statements, and look for a row in which ALL of ( $\varphi \ldots \varphi$ ) are T and $\psi$ is1F (a ЋE row). If there IS such a row, then ( $\varphi \ldots \varphi$ ) do NOT jointly imply $\psi$; if there is NOT such a row, then
$\left(\varphi_{1} \ldots \varphi_{n}\right)$ DO jointly imply $\psi$.
